Do you like knowing how things work?

**Newspaper Fun!**

Animills LLC © 2018 V15-9

**What do you know about physics?**

It's the study of the properties  
of the universe, such as light,  
electricity, magnetism  
and motion.

**#1** I weigh more than the mice, so we  
will have to move the **pivot point** of  
this adjustable seesaw so that they  
can go down and I can move up.

**Read the clues to fill in this crossword puzzle about physics:**

- step-by-step process used to generate new knowledge: observe,  
ask a question, form a hypothesis, run experiments and gather  
data to test the hypothesis, study the results – and start over again
- force that pulls some metals together (or pushes them apart)
- this force pulls matter toward other matter; keeps us on Earth's surface
- matter in motion has this; can be stored too  
(e.g., within chemicals in a battery)
- German physicist famous for developing the theory of relativity  
and the equation  $E = mc^2$  (known for his "crazy" hair)
- using what we've learned from science, we create  
these (new equipment or systems to make lives better)
- British physicist who studies black holes; beginnings of universe
- vibrations in air pressure that your ears "hear" (slow vibrations create  
low-pitched noises and fast vibrations produce higher pitches)
- an "educated guess" about how something works
- scientist who uses scientific method to add to our  
knowledge about the universe's basic properties

**The Water Cycle**

Have you ever thought about the Earth's "water cycle"? It may seem to  
you that rain is "new" water, but every drop of water on Earth has already  
been here – it just cycles around and around. **Read the sentences**  
**below and fill in the blanks to show the main steps of the water cycle.**

Yikes! What big words,  
but you can do this.

- Evaporation** – the \_\_\_\_\_ heats the water in the ocean, rivers, etc. The  
water changes into water vapor and rises into the atmosphere.
- Condensation** – the water vapor cools and condenses, forming tiny  
\_\_\_\_\_. The droplets collect to form clouds or fog.
- Sublimation** – ice from polar regions and ice caps from \_\_\_\_\_ slowly  
change directly from ice to water vapor (skips the liquid stage).
- Precipitation** – when drops become bigger and heavier they  
to the earth. On the way down, they may form into solids such  
as sleet or snow if air temperature is cold enough.
- Transpiration** – some fallen precipitation goes into the ground to be  
absorbed by the roots of \_\_\_\_\_; it then goes  
into the leaves where it is used in photosynthesis;  
any extra water rises from the leaves as water vapor.
- Runoff** – rain falls onto the earth, "runs" over it into brooks and rivers, then  
\_\_\_\_\_ into the oceans (snow can melt and do the same).
- Infiltration** – some water seeps into the \_\_\_\_\_, adding to the water  
table underground (this is how homes with wells get water).
