**Volcanoes!**  
Tiny green crystals called "olivine" may be found in lava rock. (Gem-quality olivine is called "peridot".)  
It is used for jewelry.

Three Kinds of Volcanic Eruptions  
1. Plinian eruption - shoots rocks into the air at speeds of 800 miles per hour.  
2. C. Pelican eruption - lava and volcanic ash flow down the side.  
3. B. Dormant eruption - no activity for a long time.

1. molten rock, steam, gases exploding from volcano  
2. mountain or hill with a crater or vent that can allow the magma, gas and steam to escape  
3. volcanic ash 'raining' from the sky; dangerous to people and can even interfere with airplane engines  
4. ancient Roman god of fire; "volcanoes" named for him  
5. volcano that has had an eruption somewhat recently  
6. rocks melted into liquid form, trapped under the surface of the Earth  
7. sections of the Earth's surface that slide, glide and bump into each other  
8. circular dip in the Earth's surface caused by a past volcanic eruption  
9. volcano that scientists think will never erupt again  
10. area under the Earth between the crust and the core; mostly made of magma  
11. scientist who studies volcanoes, how they form and behave  
12. this rock is often in slow-moving magma  
13. 25,000 mile area surrounding the Pacific Ocean; home to 90% of world's earthquakes, 75% of the volcanoes  
14. where the space underground is sizzling; perfect area for a number of volcanoes  
15. magma that has reached the surface of the Earth through a volcanic eruption  
16. "sleeping" volcano

We are learning about volcanoes.

There are about 1,500 active ones worldwide.

Kids: color stuff in!

**Volcanoes!**

Do you know that there are about 1,500 active volcanoes worldwide? They remind us that deep beneath the mantle of the Earth is magma, or molten rock. When the magma moves up the vent of a volcano and erupts, we see the steam, gas and ash cloud that it blows into the air. Lava flows out and down the sides of the volcano. The lava is fiery and dangerous. When Hawaii's Kilauea volcano erupted in 2018, it forced thousands of people to flee their homes.

Not all volcanoes are the same. A "shield" volcano is flat. A "composite" volcano is tall and thin.

Scientists who study the earth's physical structure and what it is made of are called geologists. Volcanologists are geologists who specialize in studying volcanoes and work to uncover the mysteries of volcanoes.

**Read the clues to fill in the puzzle:**

- molten rock, steam, gases exploding from volcano
- mountain or hill with a crater or vent that can allow the magma, gas and steam to escape
- volcanic ash 'raining' from the sky; dangerous to people and can even interfere with airplane engines
- ancient Roman god of fire; "volcanoes" named for him
- volcano that has had an eruption somewhat recently
- rocks melted into liquid form, trapped under the surface of the Earth
- sections of the Earth's surface that slide, glide and bump into each other
- circular dip in the Earth's surface caused by a past volcanic eruption
- volcano that scientists think will never erupt again
- area under the Earth between the crust and the core; mostly made of magma
- scientist who studies volcanoes, how they form and behave
- this rock is often in slow-moving magma
- 25,000 mile area surrounding the Pacific Ocean; home to 90% of world's earthquakes, 75% of the volcanoes
- where the space underground is sizzling; perfect area for a number of volcanoes
- magma that has reached the surface of the Earth through a volcanic eruption
- "sleeping" volcano
