Earth Day Energy Today and Tomorrow!

People are always working on ways to get the energy we need while keeping the ground, air and water clean, as well. Some people are exploring "clean coal." Others are using "renewable" forms of energy - like solar panels or wind turbines.

Read the clues to fill in the puzzle:

- The major fuels we use for energy today are called ____ fuels because they are made from parts of animals and plants that have been under heat and pressure in the Earth's crust for millions of years.
- Pieces of black ____ we dig out of the ground are used in power plants to generate electricity.
- A thick liquid we pump out of the earth and use to heat our homes or turn into gasoline to run cars.
- Natural ____ is pumped out of oil fields or other underground fields. It is used to heat homes and water and to cook food on stoves. Russia has the world's largest amounts.
- Once we use up the **fossil fuels** they will be gone. Today, scientists are working hard on fuel sources that can be regrown or reused. They are called ____ fuels.
- Giant, fan-like structures with blades that you might see in fields are called turbines. They use the ____ as a source of power. They make electricity to power homes.
- Another **renewable** source of power is _____. We use dams to hold water back and then slowly let it flow through to spin generators to make electricity. This is called hydropower.
- In very sunny areas, you can see panels that collect ____ energy. This is energy from the sun's rays. The special cells in the panels can change sunlight into electricity.
- Have you heard of bioenergy? This form of energy is created from ____ like corn or grains, or may be made from wood scraps or animal waste. It is a renewable fuel because we can regrow its sources.
- This source of energy uses heat from deep in the earth. Boiling liquid or steam is pumped up to the surface and passed through machines to generate electricity.
- Have you heard of ____ power plants? They generate energy by splitting atoms. When the atoms are split apart they release energy. France generates almost all of its own electricity by using nuclear power plants - and sells energy to other countries, too.
- Colorless, odorless, highly flammable gas - the lightest known element in the universe. It is used in "fuel cells" that can run cars and heat homes.

Wind turbines are one way to generate power using a renewable resource. They help to cut pollution.

Chitter! Get out of my photo!

Energy Puzzle

Clues:

- 1. solar
- 2. wind
- 3. plants
- 4. nuclear
- 5. fossil
- 6. coal
- 7. oil
- 8. gas
- 9. water
- 10. renewable
- 11. hydrogen
- 12. geothermal

What bright idea do you have to help save energy?
